# CareerConnect | AI Usage Log | Sprint 2

**Responsible Person:** Candys Eve Mekoupou Eko

**Project:** SOEN 341, CareerConnect-GroupA

Documentation basis: AI-assisted work discussed in ChatGPT. Review each entry and add direct chat links and repository evidence before submission. These entries do not claim actions or outcomes that were not confirmed.

## AI Usage Log: Entry #01

**Task:** Sprint 2 implementation planning

**Purpose of AI Use:** Requirement interpretation, task breakdown, and integration planning

**Chat Link:** [CareerConnect]

**AI-Suggested Content:** Helped convert Sprint 2 guidelines into a continuation plan for profiles and resumes, job listings, job applications, and recruiter posting functionality. Emphasized preserving Sprint 1 work.

**Validation:** Compared the proposed plan with the Sprint 2 feature requirements supplied in chat. Actual task ownership and completion should be checked against GitHub issues.

**Decision:** Used the plan as a guide for implementation and team coordination, not as proof of completed features.

**Reflection:** AI was effective at identifying dependencies between frontend, backend, and tests.

**Responsible Person:** Candys Eve Mekoupou Eko

**Prompt:**

*I am working on CareerConnect-GroupA for SOEN 341 at Concordia University.*

*Continue from our existing repository rather than restarting the project. Review the current Sprint 1 implementation and identify unfinished requirements, missing features, documentation gaps, and necessary improvements.*

*Help me implement and verify the React frontend, FastAPI backend, authentication, user profiles, and resume functionality.*

*Guide me step by step with exact commands, code changes, acceptance tests, GitHub issue updates, and required Sprint 1 deliverables. Clearly distinguish completed work from work that still needs verification.*

## AI Usage Log: Entry #02

**Task:** Repository and development workflow support

**Purpose of AI Use:** Code navigation, command troubleshooting, and integration support

**Chat Link:** [CareerConnect]

**AI-Suggested Content:** Provided PowerShell commands to run frontend and backend services and guidance on project structure, API integration, and development workflow.

**Validation:** Commands and outputs were checked against user-shared terminal results when available.

**Decision:** Accepted guidance selectively and verified commands in the local environment.

**Reflection:** AI explanations reduced setup friction, but local execution was essential for validation.

**Responsible Person:** Candys Eve Mekoupou Eko

## AI Usage Log: Entry #03

**Task:** AI usage reporting and documentation

**Purpose of AI Use:** Documentation drafting and transparency

**Chat Link:** [CareerConnect]

**AI-Suggested Content:** Assisted in preparing structured AI usage reports describing the objectives, methods, and reasons for using AI in Sprint 1 and Sprint 2.

**Validation:** Reviewed report organization against requested sprint documentation and formatting preferences. Final submitted versions should be compared with repository files.

**Decision:** Used the drafted reports as editable documentation subject to personal review.

**Reflection:** An AI log is most reliable when it distinguishes suggested content from actions actually performed and tested.

**Responsible Person:** Candys Eve Mekoupou Eko
