Ron Rozenberg - 40315090

Vladislav Shkuratov - 40335130

Thomas Martel - 40264334

Doryan Gonin - 40207095

Date due: November 9th, 2026

"We certify that this submission is our original work and meets the Faculty's Expectations of Originality."

Group A members,
September 27th, 2026

SPRINT OBJECTIVES

The main goal of Sprint 3 was to complete the remaining core features of CareerConnect, start working on the generative AI features, and continue using testing and organization best practices.

Note:
Sprint 3 also has a big focus on initial and continuous deployment (CD) for our team.
More information about this is provided in "Challenges" part of this report.

IMPLEMENTED FEATURES

Below is a list of all the features that were implemented during Sprint3.
Note that some of those features were not due for this sprint. In those cases, more explanation is provided.

Note:
Our "Job Application Submission" feature was complete but only got the frontend for Sprint3.

---

1. **Recruiter Dashboard and Posting Management**
   The bulk of the backend for this feature was already completed in advance (for Sprint2), Sprint3 refined on the backend (mainly, differentiating between 'User' and 'Recruiter' accounts.
   The frontend is missing.

2. **Application Analytics and History Dashboard**
   The backend (DB, computation service, endpoints) and unit tests were implemented.
   Frontend is missing.

3. **Notifications and Reminders**
   The backend (DB, computation service, endpoints) and unit tests were implemented.
   Frontend is missing.

4. **AI Feature(s)**
   Interview Preparation AI chatbot.
   Frontend and test cases done, backend functional but needs refining.

ORIGINAL FEATURES

Note:
Our original features haven't been worked on yet.
More details about the features can be seen in the Sprint2 report

Chat feature - **Company Reviews** - **Ghost Posting Prevention**
AI interview Preparation - **AI suggested postings**

CHALLENGES

Deployment Issues
Our initial deployment plan was to use *HuggingFace Spaces* to host our backend.
Being the ONLY existing free host that offers more than 512MB of memory, this would've allowed us to host our AI model locally (which was our initial plan for our AI features).
HF deprecated their free offers which forced us to pivot towards another host.
This led to an entire rethink of our AI features (we are now forced to use API calls) and also forced us to write a PostgreSQL compatibility layer since HF was the only host with native SQLite support for permanent DB.

CONTRIBUTIONS

Thomas:

- Handled "Job Search" feature frontend audit (UX and functional issues)
- Fixed all 11 aforementioned issues (UX ambiguity, unused endpoints, wrong endpoints, missing pages, erroneous logic ...)
- Reviewed pull requests with constructive feedback
- Documented issues with AI feature and reworked FIXES.md
- Rewrote all test cases for the AI interview prep feature
- Rewrote AI provider and prompt validation handler
- Fixed issues with user creation and auth lockout

Doryan:

- Researched deployment strategies
- Implemented initial deployment and CD management (and all underlying modifications) across multiple hosts (Render Static Site, Render WebService, NeonDB)
- Implemented the Analytics feature backend (DB, computation, endpoints)
- Implemented the Analytics feature automated testing (and integrated it in CI)
- Implemented the Notifications feature backend (DB, computation, endpoints)
- Implemented the Notifications feature automated testing (and integrated it in CI)
- Reviewed PRs for stale branches, handled merge conflicts and wrote fixes (#130)
- Kept the backlog and roadmap up to date (sub-issues, acceptance criteria, roadmap ...)
- Handled and documented acceptance testing for all features (new and old)
- Authored meeting minutes, team update messages and final report
- Thorough testing of previously untested PRs and issue logging
- Deployed AI feature manually to account for new environment secrets.

Candys:

- Wrote the “Application Submission” feature frontend (from Sprint 2)

Vlad:

- AI interview prep feature frontend and initial backend framework (later reworked) + test cases (reworked)
- Analytics page frontend
- Application submission UI issue fixing (as documented in #131

Ron:
