MEETING MINUTES

Meeting N°	02
Date	15/10/26
Time	15:00 – 15:45
Attendance	Everyone

Talking Points

- **New teammate** ---------- Presentation of the project, discussion on his skillsets
- **Sprint 2 requirements** ---------- Reminder on the new contribution log requirement
- **Work already done** ---------- CI and testing, backend resume handling
- **Remaining work** ---------- Full frontend, job application backend
- **Potential Frontend changes** ---------- Eventual switch to better reflect team's skillset

Decisions

- Armin goes through the codebase to get familiar with it and assess the feasibility of switching to `Next.js` and `shadcn` for frontend while keeping the backend intact
- Thomas works on the job search backend (database and filtering)
- Doryan continues to enhance the test suite to reflect the backend changes
- Vlad, Ron, Candys and Armin split the frontend depending on Armin's findings
- Once the job search backend is done, those with less work on the rest of the code will work on application submission and status tracking
- Given the longer timeframe of this sprint and the work already achieved, it would be beneficial to get ahead on next sprints' features if time allows it

Note:
All of the decisions taken in the meeting are based on issues and user stories present on the GitHub project board at that time, as well as team discussions (like mentioned in talking points). Looking at the project board is necessary to better understand the scope of the meeting.
