CareerConnect - Group A (Fall 2027)

SOEN341: Software Process | Concordia University

<Tech Badges>

What is CareerConnect?

CareerConnect is a web-based platform designed to help job seekers manage their job search activities. The system allows users to create profiles, upload and manage resumes, search for job opportunities, track submitted applications, and follow the progress of their application process. The platform aims to centralize job-search activities and help users stay organized throughout their career development journey.

Who are we?

- Candys Eko - Frontend
- Ron Rozenberg - Frontend
- Vlad Shkuratov - Backend
- Thomas Martel - Backend, Database
- Doryan Gonin - Scrum Master, Documentation, Backend

Our team's workflow is detailed in our [Wiki Page](#)

Technologies

Frontend	Backend	Database	Project Management
React	Python	SQLite	Github Projects
TailwindCSS	FastAPI	SQLModel	Github Issues
Vite	Bcrypt/JWT		

Identified problem

Job seekers routinely apply to dozens of positions across multiple platforms and lose track of where each application stands.

There is rarely a single place to store resumes, monitor application status (Applied, Interview, Offered, Rejected), or get reminded about upcoming deadlines.

At the same time, recruiters lack a lightweight, user-friendly way to post openings and manage the flow of incoming candidates without enterprise-grade ATS software.

Proposed Solution

CareerConnect is a web-based platform that centralizes the job search process for job seekers and provides a lightweight way for recruiters to manage their postings. Job seekers can build a profile, upload resumes, search and filter postings, apply, and track every application's status from one dashboard. Recruiters can post openings, review applicants, and update candidate status. The platform also integrates a Generative AI feature that gives job seekers automated resume feedback and job-matching suggestions.

Setup instructions

See the CareerConnect [Wiki Page](#) (Work in Progress)

Proposed features

- Chat feature (recruiters can chat with applicants directly from the website)
- Company Reviews (users can leave reviews on companies they worked for to help other job seekers)
- Ghost Posting Prevention (after a long period of inactivity, a posting gets demoted to avoid having people apply for no reason)
- AI interview Preparation (based on the posting you applied to, AI can help you get ready for your interview)
- AI suggested postings (Job Seekers can get advice on which postings suit their profiles)
