MEETING MINUTES

Meeting N°	04
Date	05/11/26
Time	16:45 – 17:30
Attendance	Doryan, Thomas

Talking Points

- **Deployment Issues** --------- How does the change affect our codebase and next features
- **AI features** ---------- How to pivot from our initial local model plan

Decisions

- Explanation of how deployment changed our codebase and relevant fixes
- Explanation of how the codebase was adapted to impact local development as little as possible (case scenarios with dynamic addressing to allow `localhost` & remote host)
- Impossibility to follow our initial plan for a locally hosted (by local, we mean on a remote host under our control rather than via an API key) AI model
- Potential solution(s) to this problem; we have no choice but to use API calls to a foreign AI model (likely via openRouter) for our features.

Note:
Due to inconsistent host documentation, language specificities, and deprecated free plans, the work on deployment was iterative and spanned PRs #119, #123, #124, #125, and #126 and deeply modified our original planning (especially regarding AI features, hence this meeting).
