Sprint 3 Contribution Log: Vlad Shkuratov

GitHub: vshkuratov4
Sprint: 3 (work done November 8, 2026)

Summary

Issue	Title	Branch	PR	Status
#132	US-14.01: Interview Preparation Backend & API	`feature_132`	#143	In review
#134	US-14.03: Interview Preparation UI	`feature_132`	#143	In review
#133	US-14.02: Interview Prep Unit Tests	`feature_132`	#143	In review
#116	US-07.04: Analytics Page (UI)	`Analytics_Page`	#___	In review
#131	US-06.03: Submission UI Issue Fixing	`fix/131-submission-ui`	#___	In review

Details

#132: Interview Preparation Backend & API

- Connected the backend to Groq's free API (default model `openai/gpt-oss-20b`, set with `AI_MODEL`)
- Built the system prompt from the selected job posting and the text of the user's PDF resume
- Added prompt rules so the AI only answers questions about preparing for that interview
- Added message limits (2000 characters per message, last 20 messages sent to the AI)
- The app still runs without an API key, and only the interview endpoints return a 503
- Tested live with real AI calls: on-topic, off-topic and "ignore your instructions" questions, no resume, corrupt PDFs and long answers

#134: Interview Preparation UI

- Added `InterviewSession` and `InterviewSessionMessage` tables so past sessions are saved
- Added endpoints under `/api/interview/sessions` to list, create and open sessions and send messages
- Built three pages: `/interview` (past sessions), `/interview/new` (choose an application) and `/interview/{id}` (conversation)
- Added an Interview Prep link to the navbar and made the navbar wrap on phones
- Tested in the browser, including refreshing and reopening a session

#133: Interview Prep Unit Tests

- Added `tests/test_interview.py` with 9 tests on prompt generation and context passing (the AI call is faked, so CI needs no key)
- Checked that the tests catch bugs by breaking the code on purpose four ways and confirming tests failed each time
- Full suite: 61 passing

#116: Analytics Page (UI)

- Added the Analytics page at `/analytics`, opened from a "View analytics" button on the dashboard

- Bar charts for searches, applications and viewed postings by day, week or month, with a "View data" table
- Salary range chart, most frequent category, most common location, and the My Applications list
- Each graph and stat has its own date range
- Frontend only, with no new libraries

#131: Submission UI Issue Fixing

- Fixed the messages after applying ("Application Submitted" vs "Already Applied")
- Made the name field editable and saved it to the profile
- Replaced the confusing upload controls with one working Upload Resume button
- Added a standalone application page at `/jobs/{id}/apply` for the Apply buttons
- Added status badges and a greyed-out "Already applied" button
- Removed the duplicate back button
- The email field stays read-only on purpose (storing a different email needs a new database column)

Other

- Wrote the PR descriptions for all three PRs
- AI usage log: `AI_Log/Vlad/AI_Log_Sprint3_Vlad.pdf`
