September 27th, 2026

SPRINT OBJECTIVES

The main goal of Sprint 2 was to continue the work done in Sprint 1 on the features and the documentation while integrating a CI pipeline and unit tests into our workflow.

Feature wise, Sprint 2 was mainly focused on job postings and applications.

Note:
A new team member was added during Sprint2 which explains why the README and the roles were slightly modified.

IMPLEMENTED FEATURES

Below is a list of all the features that were implemented during Sprint2.
Note that some of those features were not due for this sprint. In those cases, more explanation is provided.

Note:
Some of those features were due for other sprints.
In those cases, more details are provided (namely features 1 and 4)

---

1. **User Profile and Resume Management (LATE)**
   This feature was backend complete by the end of Sprint1.
   The frontend for this feature was only delivered near the end of Sprint2.

2. **Job Search and Job Listing Interface**
   The backend and unit tests are ready and working. Missing Frontend

3. **Job Application Submission and Tracking**
   The backend and unit tests are ready and working. Missing Frontend

4. **Recruiter Dashboard and Posting Management (EARLY)**
   This feature is to be complete by Sprint3.
   The entire backend (and unit tests) was ready before the end of Sprint2.
   It is only currently missing the frontend.

ORIGINAL FEATURES

Below are listed our team's innovations and original features for CareerConnect:

Chat feature
Recruiters can start a chat with applicants directly from the website in order to assist in interview scheduling, or to ask additional information to the applicants.

Company Reviews
Users can leave reviews for companies they worked for in order to help other job seekers in their search.

Ghost Posting Prevention
After a long period of inactivity, a posting gets demoted (using "feed-like" behavior) to avoid having people apply to a posting that isn't active.

AI interview Preparation
Based on the posting you applied to and your resume, AI can help you get ready for your interview by providing you with mock questions and helping you list your strong points.

AI suggested postings
Based on their resume and qualifications, job seekers can get advice on which postings best suit their profiles.

CHALLENGES

User Profile Frontend
An early PR dedicated to the frontend entirely rewrote the backend routing instead of using the endpoints we had set up. If merged, this would have failed our automated tests.
This forced us to rewrite a new frontend and manually move the features over.

Merge Conflicts & stale branches
A feature branch was out of sync (44 commits behind `main`) and had incorrect folder structures (duplication of the `src` folder). This forced us to refuse the PR and (along with the other issue mentioned above) rebuild the feature entirely.

Communication and Task Reassignment
Coordinating the project was difficult due to slow (or absent) response times in team chats. Because of that, some team members had to pick up extra work to get features ready.

CONTRIBUTIONS

Thomas:

- Built the backend for ALL features of Sprint 2
- Built the frontend for the user profile and resume management feature.
- Added unit tests for recruiter dashboard and posting management
- Reviewed pull requests with constructive feedback

Doryan:

- Implemented the CI pipeline.
- Implemented unit testing and wrote unit tests for all backend features.
- Built the dynamic return order algorithm for the job search feature.
- Authored meeting minutes, team update messages and final report
- Kept the backlog and roadmap up to date across the entire sprint

Candys:

- Built a frontend for the user profile and resume management feature (PR was rejected due to merge conflicts but most features were kept and integrated in the new frontend)
